ABSTRACT

The report tabulates and analyzes data on the occupational curricula of 17,460 secondary and 11,731 postsecondary schools. A standardized list of 170 occupational fields was used to ascertain the exact programs offered at each institution. For some of the analyses, these fields were grouped into seven main fields: agri-business; marketing and distribution; health; home economics (personal); home economics (career); business and office; technical; and trade and industrial. Data were collected from all States and territories, and are presented in table form with accompanying discussion. At the secondary level, the programs offered by the largest number of schools were: homemaking, stenographic, secretarial, and related; typing and related; agricultural production; and filing, office machines, and clerical. Programs offered by the largest numbers of postsecondary institutions were: cosmetology; stenographic, secretarial, and related; commercial pilot training; accounting and computing; filing, office machines, and clerical; typing and related; business data-processing systems; and aircraft operations. Correspondence programs were offered by 338 schools, of which 155 offered only correspondence work. In addition, there are data on funding, accreditation, and date of school foundation. The survey forms used are appended. (Author/PR)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

HIGHLIGHTS

Occupational programs were offered by 17,460 secondary schools (approximately 60 percent of all secondary schools) and 11,731 postsecondary schools (including 1,177 colleges and universities).

Among secondary schools offering vocational education, 96.7 percent were publicly supported. Almost the opposite was true of postsecondary schools, where 84.8 percent were nonpublic. Among nonpublic institutions, 364 secondary schools and 460 postsecondary schools were sponsored by religious organizations.

While specialized schools did exist at the secondary level, 94.5 percent of the schools with occupational programs were regular or comprehensive high schools. Special programs for the disadvantaged were reported by 3,973 schools and for the handicapped, by 2,657 schools.

At the secondary level, the programs offered by the largest numbers of schools were homemaking (11,805 schools); stenographic, secretarial, and related (6,879); typing and related (6,872); agricultural production (6,659); and filing, office machines, and clerical (6,251).

When the 11,731 postsecondary schools were classified by type of training offered, the largest number was composed of cosmetology schools (2,443), followed by flight schools (1,880), business/commercial (1,679), technical/vocational (1,422), hospital (1,266), and trade (1,082). Next were junior/community colleges (787), 4-year colleges (390), technical institutes (362), and all other (265).

Programs offered by the largest numbers of postsecondary institutions were cosmetology (2,396)*; stenographic, secretarial, and related (1,242); commercial pilot training (1,151); accounting and computing (976); filing, office machines, and clerical (935); typing and related (919); business data-processing systems (823); and aircraft operations (705).

Of the 11,731 postsecondary schools, 68.3 percent were accredited by an agency recognized for this purpose by the U. S. Office of Education or were approved for certain Federal student aid programs. The largest numbers of schools were approved by the Veterans Administration (6,597) and the Federal Insured Student Loan Program (4,145).

Although the oldest hospital school was founded in 1734, the typical postsecondary school began in the 1960-1964 period. In recent years, slightly over 500 new noncollegiate postsecondary career schools have begun operations each year. It appears that an equal number of schools will probably close or merge.

Correspondence programs were offered by 338 schools, of which 155 offered only correspondence work and 183 also offered resident courses.

---

* The fact that there were somewhat more cosmetology schools than cosmetology programs indicates that some of the schools offered other programs in the field (such as beauty shop management).

NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."—Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

In the early 1970's, the National Center for Education Statistics (NCES) began planning a project to develop directories of institutions offering vocational training. Two publications[1] resulted: the first, Directory of Secondary Schools With Occupational Curriculums, 1971, lists public and private secondary schools which offer vocational programs; the second, Directory of Post Secondary Schools With Occupational Programs, 1971, includes public and private technical or vocational schools, technical institutes, business schools, cosmetology or beauty schools, flight schools, trade schools, correspondence schools, hospital schools, and 2- and 4-year colleges offering subbaccalaureate vocational programs.

This analytical report was developed in response to the national attention now focused on career education and the significance of these data in educational and manpower planning. It presents some information which did not lend itself to the format for a directory and provides analytical tables dealing with the data.

The information that provided the basis for this report was acquired with the assistance of the various States. Coordinators in the States identified the schools, developed the data from them, and transmitted the results to NCES for compilation and publication. The secondary school data collection was coordinated by Nicholas A. Osso and the postsecondary information by Evelyn R. Kay, both of the Adult and Vocational Education Surveys Branch. Data processing was directed by W. Craig Rose and Stanley Kwaczala.

---

[1] These may be ordered from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

Planning assistance on the directory project was provided by a number of persons representing educational associations, State departments of education, and national manpower concerns. Within the U. S. Office of Education, assistance came from a planning committee consisting of Sherrill D. McMillen, Katherine K. Wallman, and LeRoy A. Cornelsen of the Bureau of Adult, Vocational, and Technical Education; Leslie W. Ross of the Bureau of Higher Education; Anita V. Turner of the Bureau of Elementary and Secondary Education; and George E. Klinkhamer of the Bureau of Education for the Handicapped. Current plans call for the directories to be updated periodically.

The data summarized in this publication were reported by school administrators. Some filled out special forms for the directory project. Others provided the data to State departments of education or through the NCES Higher Education General Information Survey (HEGIS), where it could be utilized to provide data for the directories and this report. Obviously, this report could not have been prepared without their cooperation, and this assistance is deeply appreciated.

INTRODUCTION

During the 1971-1972 school year, the National Center for Education Statistics (NCES), then part of the Office of Education (OE) worked cooperatively with the various States and other geographic areas to develop two directories of schools that offer occupational curriculums.[1] These directories included some of the materials gathered during the collective endeavor. This report provides an analysis of the remaining important information about schools that offer career training. It is designed to respond to the increasing interest in career training, for which there is still a relative paucity of data.

Several reasons encouraged collection of information on occupational training: (1) The strong national concern for career education led to a series of questions about occupational training programs, at both secondary and postsecondary levels; (2) business development and employment area planners need information on the sources of trained manpower; (3) State legislatures and State educational planners see increasing need to consider the total universe of schools when allocating support for occupationally related programs; (4) school and agency guidance counselors and their students need information on opportunities for special training; and (5) the universe of institutions offering occupational training will be used as the basis for selecting samples of schools for studies designed to address some of the most pressing problems facing occupational education.

Criteria for Inclusion in Study

This report presents information on both secondary and postsecondary schools that offer programs of occupational preparation below the level of the bachelor's degree. Data were collected with use of the definition of vocational education employed by OE's Bureau of Adult, Vocational, and Technical Education--namely, as instruction designed to (1) prepare individuals for gainful employment in recognized occupations and/or new and emerging occupations, (2) assist individuals in making informed and meaningful occupational choices, and (3) upgrade or update the skills of individuals already in an occupational field.

---

[1] See footnote on page iii. Although data were gathered for two separate directories, collection efforts were coordinated to obtain identical information for the same general time period.

Information was obtained only on programs or curriculums offered by institutions, not on individual courses. A program was defined as a planned sequence of courses leading to a specific vocational objective. Thus, a secretarial science program might include courses in typing, shorthand, filing, and office practices. The program classification system was taken from Handbook VI, published by USOE and abstracted in appendix A.[2]

At the secondary level, information was included on all schools, both public and nonpublic, that offered one or more vocational curriculums in any or all of grades 9, 10, 11, and 12. Thus, some junior high schools were included, since they offered the first part of an occupational training sequence. Likewise, some schools with elementary grades also were included, such as a school with all of grades 1 through 12. Some secondary schools were included by virtue of their offering vocational education to students at the postsecondary and adult levels.

Secondary schools were classified as follows:

Regular or comprehensive -- a school with several departments (e.g., English, science, vocational) offering a diversified educational program.

Specialized vocational -- a school used exclusively or principally to provide vocational education to persons available for full-time study.

Combination specialized -- a school used exclusively to provide vocational education to persons available for full-time study, who are in or have left high school.

Area vocational -- a public school, approved by the State board of vocational education, to provide instruction in occupations for residents of an area, usually larger than the local administrative school unit.

---

[2] John F. Putnam and W. Dale Chismore. U.S. Office of Education (OE-23052), 1970.

Postsecondary schools were classified as follows:

Vocational -- a school providing occupational education to persons who have completed or left high school and are available for full-time study. Special-purpose schools in this group offer training for careers in commercial art, dental assisting, and mortuary science.

Technical institute -- a school offering instruction in one or more of the technologies at a level above the skilled trades and below the professional level.

Business or commercial -- a school offering courses for business occupations such as accounting, data processing, and secretarial work. Special-purpose schools in this category may also train for careers in insurance, real estate, and sales.

Cosmetology -- a school offering programs in beauty treatments, such as care and beautification of hair, complexion, and hands.

Flight -- a school offering programs for training as aircraft mechanic, pilot, or work in other technical fields related to aviation.

Trade -- a school offering programs in one or more trades, such as auto mechanics, baking, barbering, bartending, carpet-laying, cooking, drafting, fireman training, ground maintenance, horseshoeing, laundering, locksmithing, meat processing, photography, police training, polygraph, radio/TV broadcasting, sewing-tailoring, truck driving, and welding.

Correspondence -- a school offering instruction only through the systematic exchange between teacher and student of materials sent by mail. No facilities generally are available for resident students, except for short-term terminal experience training.

Hospital -- a school operated by a hospital, sanitarium, or convalescent home, offering instruction for medical or paramedical occupations.

Junior/community college -- an institution offering the first 2 or 3 years of college instruction. It frequently grants a certificate or an associate degree, but not a bachelor's degree.

College -- an institution offering instruction at the college level leading to a bachelor's or higher degree. It frequently offers occupational programs leading to an associate degree, diploma, or certificate below the baccalaureate.

Other -- schools or institutions not classified in any of the above groups, such as schools of modeling, foreign service, flight training, maritime occupations, and broadcasting. Also included in this category are training under the Manpower Development Training Act (MDTA) and Job Corps program, schools for the handicapped, vocational rehabilitation schools, and correctional institutions.

The control of these secondary and postsecondary schools was divided between those with public and those with nonpublic sponsorship. At the secondary level, these categories were used:

Public, supported primarily by Federal funds
Public, supported primarily by State funds
Public, supported primarily by local funds

Nonpublic, supported primarily by funds from a religious organization
Nonpublic, other

For postsecondary schools, these control categories were defined:

Public, State, or local

Nonpublic, proprietary
Nonpublic, independent, nonprofit
Nonpublic, affiliated with a religious group

A standardized list of 170 occupational fields was used to ascertain the occupational programs offered at each institution. This list, which was taken from Handbook VI, appears in appendix A. For purposes of analyzing the data, 8 major types of fields into which these 170 fields may be aggregated are used in this report. These main types are:

Agri-business
Marketing and distribution
Health
Home economics, homemaking (for personal use)
Home economics, gainful (for use in a career)
Business and office
Technical
Trade and industrial

The information on these institutions was collected during the period September 1971 to November 1972. For secondary schools, data were requested as of October 31, 1971, although some States provided their information for the entire 1971-72 (or, in a few cases, 1970-71) school year. For postsecondary schools, information was requested on programs offered during the 1970-71 school year. In actuality, many schools reported on programs offered at the time the survey form was completed--in some cases, these were filled out in fall 1972. The two published directories contain more details on the times used for the various reports.

Sources of Information

Information was developed through a series of cooperative arrangements with the States and other areas (Canal Zone, District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands). Each chief State school officer (or chief State vocational education director) was asked to nominate a coordinator to work with NCES on this project. Every State and other area nominated such an officer. Cost-reimbursable contracts were developed with these States to help meet expenses incurred in collecting and editing data. Later, because of workload or difficulty with contractual arrangements, private contractors took over the work for five of the States. A list of all these cooperating officials appears in the two directories.

State coordinators or contractors participated in a series of regional planning conferences held in summer 1971. In September 1971, NCES sent forms and final instructions for collecting, editing, and transmitting information about area schools.

The States were completely free to provide data in any way possible. Some obtained information (particularly for secondary schools) from existing records. Others made special surveys (particularly for nonpublic postsecondary schools). Most States had to search a variety of sources to obtain a list of postsecondary schools with occupational programs. Information on colleges with occupational programs was developed within NCES, by use of information already available from the Earned Degrees Conferred Section of the Higher Education General Information Survey (HEGIS).

Information was transmitted to NCES on forms, cards, or tapes. All these were adapted and edited to fit the specifications of the master tape. Data were collected on the number of schools offering occupational programs and on the number and types of programs offered. To provide information on enrollments, both by institution and by program, a survey of Programs and Enrollments in Postsecondary Schools was made in 1974 (this will be reported in the near future). Obviously, conclusions on relative enrollment should not be based upon the number of schools of each type. The typical flight school, for example, may have only 30 students a year; by contrast, some correspondence schools may have as many as 20,000 registrations a year.

The issue of nonresponding institutions merits special mention. At the secondary level, the fact that Federal funds have been available to support identifiable vocational education programs meant that the States already had a clear list of public schools and their programs, and such data became the basis for the public secondary school part of this study. Less clear is the completeness of information on private secondary schools. States did survey these institutions and a total of 573 private schools with occupational programs was reported.

At the postsecondary level, all schools with a currently operating telephone number were included in the study. Although most of the schools surveyed responded to the written request for information, no precise figures were available on the number responding to each level of request, since the States played a major role in the followup. Where no written information was received, schools were contacted by telephone and most provided key information. Where telephone contact was unsuccessful, but the school had a currently operating telephone number, the assumption was made that the school was operating and it was included in the study. This included, for example, institutions which are open only in the summer months and may not be available by telephone at all times during the rest of the year.

A more serious problem is the completeness of the universe of postsecondary schools used in this study. In other words, were there many other schools not identified when institutions were contacted for this first-time study? The answer is undoubtedly yes, probably about 15 percent more. Some additional schools have been identified as a part of the development of the second edition of the Directory of Postsecondary Schools with Occupational Programs. What complicates the problem is that, unlike colleges and universities, occupational training schools are founded and closed at a fairly high rate.

SECONDARY SCHOOLS WITH OCCUPATIONAL CURRICULUMS

Although conducted during the same time period, data collections from secondary and postsecondary institutions were slightly different, reflecting their distinctive characteristics and methods of organization. In this section, occupational training offered by secondary schools will be analyzed and then, in a subsequent section, the same will be done for postsecondary schools.

Types of Schools

National statistics for 1971 reported a total of 29,170 secondary schools, both public and nonpublic.[3] Of these, 60 percent (17,460) offered one or more occupational programs.

At the secondary level, the major source of occupational training was the regular or comprehensive secondary school operated by a local school district, as shown in table 1. Of the 17,460 schools with occupational programs, 14,906 (85.4 percent) were of this type. A surprisingly high number, 1,363 (7.8 percent), of these schools were State operated. Most of the 55 federally operated schools were run by the Bureau of Indian Affairs or were part of a correctional facility.

Of the total, 573 (3.3 percent) of the schools were operated by nonpublic organizations. Of these, 364 were operated by religious groups, primarily Roman Catholic.

By type of school, 94.5 percent (16,494) of the schools with programs were regular or comprehensive secondary schools. Specialized vocational schools

Nonpublic total	573	496	6	11	60
Religious	364	347	4	1	12
Other	209	149	2	10	48

comprised 2.0 percent (357) of the total; combination special schools, 1.1 percent (199); and all other schools, 2.3 percent (410).

Since most public education is controlled by States and local districts, it is reasonable to expect distinctive variations among the States in their reliance on the different types of schools, for providing occupational training, as shown in table 2. Table 2 does not show details on area schools operated by the various States. These schools generally serve students from more than one school district, as in Alabama where one area school generally provides special training for students from several counties.[4]

The main source of occupational training for all States was the regular or comprehensive high school. Thus, most students wishing to take a career curriculum in high school were able to do so in the secondary school they would normally attend. However, some States used specialized vocational schools, a relatively high number of which were organized in Alabama, Illinois, Massachusetts, New York, Ohio, Pennsylvania, and South Carolina. Publicly supported combination specialized schools were found in less than half the States or other areas, with the largest numbers in Connecticut, Kentucky, Virginia, and Puerto Rico. Of schools labeled "other," a higher than normal ratio were private, with two-thirds in Connecticut, New York, and Puerto Rico. States and other areas with a high number of public schools in the "other" category included California, Pennsylvania, Florida, and Puerto Rico.

One way of measuring the extent to which occupational training was offered by other than regular or comprehensive high schools is to compute the ratio of these schools to the total number of schools involved in this training. To illustrate, over 10 percent of the occupational programs were offered by institutions other than regular or comprehensive secondary schools in Connecticut, Delaware, Illinois, Kentucky, Massachusetts, Pennsylvania, The District of Columbia, and Puerto Rico.

Special Needs Programs

A number of secondary schools offered special programs for disadvantaged and handicapped students. Others had cooperative work study, work study,

and group guidance programs. These programs were eligible for special Federal financial support, under the Vocational Education Amendments of 1968 (Public Law 90-576).

Before discussing relevant statistics, definitions of terms pertaining to special needs should be reviewed. The most comprehensive definitions of disadvantaged and handicapped appear in the Federal Register.[5]

> Disadvantaged persons means persons who have academic, socio-economic, cultural, or other handicaps that prevent them from succeeding in vocational education or consumer and homemaking programs designed for persons without such handicaps, and who for that reason require specially designed educational programs or related services. The term includes persons whose needs for such programs or services result from poverty, neglect, delinquency, or cultural or linguistic isolation from the community at large, but does not include physically or mentally handicapped persons (as defined in paragraph below) unless such persons also suffer from the handicaps described in this paragraph.
>
> Handicapped persons means mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, crippled, or other health impaired persons who by reason of their handicapping condition cannot succeed in a vocational or consumer and homemaking education program designed for persons without such handicaps, and who for that reason require special educational assistance or a modified vocational or consumer and homemaking education program.
>
> Cooperative Work-Study (from the Vocational Educational Amendments of 1968) is a program for persons who, through a cooperative arrangement between the school and employers, receive instruction in vocational education by alternating of study in school with a job in any occupational field.
>
> Work Study (from the Vocational Education Amendments of 1972) is for full-time vocational education students, from 15 through 20 years of age, in need of earnings to continue their education.

---

[5] Vol. 35, no. 91, p. 11, Saturday, May 9, 1970, Section 102.3--Definitions, p. 7335.

Such students may be employed by the local education agency or some other public agency or institution but may not work for more than 15 hours a week or receive more than $45 a month.

Group Guidance is designed to familiarize students with the broad range of occupations for which special skills are required.

Individual schools were asked to check which of the above programs they offered. Some schools checked all five, and others none. While the form included the definitions cited above, no measurement was made of the extent to which schools were responding precisely to these definitions. In other words, although a school may have reported offering special help for the handicapped because it had some handicapped persons in attendance, this would not necessarily mean that a special program had been developed. The extent to which this occurred cannot be precisely estimated; most schools are public and probably know the financial advantages of utilizing the Federal support for special programs.

Table 3 shows the actual information submitted by the schools. Although not evident in this table, over 8, 654 of the 17, 640 schools (49. 6 percent) said they offered one or more of these programs. Since schools were asked to report on all programs they offered, totals for the various columns include many institutions counted more than once.

The most common type of program was work study, with 4, 484 reports of cooperative work-study and 1, 951 of work-study (a total of 6, 435). If one assumes that this includes 6, 000 different schools, then one-third of all secondary schools with occupational programs offered one of these two types of work-study. Approximately 1 school out of every 4 (3, 973 of 17, 460) offered a special program for the disadvantaged and 1 school out of every 6 (2, 657) had programs for the handicapped.

For some States, relatively few programs serving the disadvantaged or handicapped were reported; this may be attributed, in part, to the fact that programs for these students were actually merged into the regular classroom activities or that they were conducted outside the public school system in specially developed institutions.

Group guidance activities were reported by 2, 443 schools; but in 8 States, the Canal Zone, Guam, and the Virgin Islands, no schools had these programs.

Individual occupational programs reported by schools were merged into seven main program types (eight, when home economics was split into homemaking

and gainful employment categories). Table 4 shows details on these categories by State.

Overall, the most frequently offered field was home economics, offered by 14,196 schools--or over 81 percent of all schools with vocational programs. However, if the schools offering only home economics (gainful) were included, this total would be considerably less. Next in frequency were business and office (offered by 10,386 schools), trade and technical (8,080), and agriculture (7,650).

For a variety of reasons (historical and economic, to name but a few), the States exhibited distinctive differences in the types of programs offered. In contrast to the relatively low number of schools with one or more programs in agriculture in Massachusetts (13) and New Jersey (29), Illinois had 454, Texas, 873, and Alabama, 294. States readily identified with marketing (both retail and wholesale) tended to be the most likely to offer distributive education: New York (459), Illinois (375), and Ohio (385). All of these were well above the national average of 100 schools per State.

In the field of health, distinctive administrative arrangements characterized the relationship developed in each State between the public schools and non-profit hospitals, clinics, and other health training sources. For this reason, the numbers of schools offering health programs also showed sharp variations, not accounted for by the relative populations of the States. The total populations of Illinois, Pennsylvania, and Texas are fairly similar--yet the number of schools in these States which trained in health fields were 234, 58, and 47, respectively. Because of the impact of students taking home economics for nonoccupational reasons, no direct comparisons will be made for this field.

As might be anticipated, States with large numbers of business firms were most likely to offer business and office programs. In New York, for example, taking information from tables 2 and 4, of the 1,292 schools offering any vocational program, 1,060 offered it in the area of business and office occupations. Likewise, of 807 California schools with occupational programs, 758 had a program in this area, while for Michigan it was 496 of 643 schools and for Pennsylvania, 670 of 750 schools. Among the more rural States, lower ratios were shown: Iowa, 49 of 358, Mississippi, 57 of 337, and Oklahoma, 64 of 426.

Over half the schools with programs in technical fields were in four large industrialized States (New York, Illinois, Michigan, and California). Some States (Connecticut, Hawaii, Montana, Vermont, and others) reported no schools with programs in this area. By contrast, the large number of

programs in trade and industrial fields suggests the universality of demand for persons with training in construction, automotive, and other skilled fields.

A major goal of this project was to ascertain how many specific occupational programs were offered by schools at the secondary level. Table 5 presents relevant data for fields coded according to the list which is given in appendix A.

A word about the relationship between totals for types of programs offered and for specific programs offered may be appropriate. Table 5 indicates the number of school offerings in each State for each specific program, by occupational code. Thus, Alabama had 210 schools offering agricultural production (01.01), 174 offering agricultural supplies/services (01.02), etc. Information on table 4 combines this by type of program. Thus, Alabama reported that one or more specific programs in agriculture were offered by 294 schools. Listing all specific programs (as was done in table 5) yields a total of 1,461 individual programs reported in agriculture by 294 schools in Alabama.

In the field of agriculture, two States (Alabama and Illinois) offered a much higher total number of specific programs than did any other. Reflecting the demand for personnel in agriculture, production programs accounted for only 40 percent of the totals in agriculture.

Two specific fields, general merchandizing (04.08) and retail trade (04.20), which lead directly to careers in selling, and the "other" category (04.99) accounted for almost half the specific programs offered in marketing and distribution.

While training was reported in 30 health fields, programs were concentrated in the fields of nursing assistant (07.0303), practical nursing (07.0302), and dental assistant (07.0101). These three fields, plus the "other" (07.99) category, accounted for two-thirds of the total number of schools with health programs.

The large numbers of homemaking students preparing for roles in the home, rather than for outside employment, always significantly increase figures in this area. The first nine fields (referred to in this report as home economics, homemaking) accounted for 34,056 of the total number of home economics programs, while only 6,050 programs were for homemaking, gainful.

Traditionally, a large number of students move directly from business and office occupational training in secondary schools to paid jobs. Among the programs in this area, the largest number were offered in stenographic, secretarial, and related occupations (14.07), 6,879; typing and related occupations (14.09), 6,873; and filing, office machines, and clerical occupations (14.03), 6,251. The next and only other major group (excluding the "other" (14.99) category) was in the field of accounting and computing occupations (14.01), with 4,746 programs offered.

Although 29 categories were listed, two fields accounted for half of the program offerings in technical education: electrical technology (16.0107) and electronic technology (16.0108), which were offered by 1,836 schools (compared with the cumulative total of 3,702 for all programs in this area).

With 54 different fields, the most options were offered in the area of trade and industrial. While none accounted for as much as a tenth of all programs, the largest numbers of offerings were in 9 fields: 3,400 in automobile mechanics (17.0302), 3,301 in metalworking occupations (17.23), 2,957 in drafting occupations (17.13), 2,690 in other (17.99), 2,535 in woodworking occupations (17.36), 2,373 in carpentry, construction (17.1001), 1,922 in electronics occupations (17.15), 1,661 in graphic arts occupations (17.19), and 1,515 in electrical occupations (17.14). Only a third of the offerings were in the other 45 fields.

As might be expected, the highly industrialized States of Illinois, New York, Ohio, New Jersey, and Wisconsin had more than a proportionate share of these fields.

POSTSECONDARY SCHOOLS WITH OCCUPATIONAL PROGRAMS

Developing a List of Postsecondary Schools

Development of data on postsecondary schools was a much more complicated task than for secondary schools. The first job was to develop as complete a list of schools as possible. This proved formidable, involving perhaps a hundred people in the various States and other areas and utilizing a variety of techniques. Secondary sources, such as trade and accrediting associations, State vocational boards, and various Federal agencies, often provided names. Frequent use was made of primary sources, such as checking the yellow pages of telephone directories and checking local fire and health records for approval given to operate a school.

Fortunately, the system used to collect data on postsecondary schools assured that at least one person in every State was working directly on this project who could make the maximum use of existing, and varied, local resources. Lists developed by the State and other area coordinators were augmented by a new list of vocational schools purchased directly from a private publisher.

To avoid duplicating the Higher Education General Information Survey (HEGIS) and to make maximum use of existing data, information on colleges with sub-baccalaureate programs was obtained from the Earned Degrees Conferred Section of HEGIS for 1970-71.

Identifying new or previously undiscovered postsecondary institutions is a never-ending task. For this reason, the Directory of Postsecondary Schools With Occupational Programs is scheduled for periodic revision. The first edition utilized 1971 data; the second edition, based upon information collected between November 1973 and May 1974, is now being prepared.

To aid in determining what is a postsecondary school, a definition developed for the Federal Interagency Committee on Education was used. This definition, in its draft of March 27, 1974, is as follows:

> A postsecondary educational institution is defined as an academic, vocational, technical, home study, business, professional, or other school, college or university, or other organization or person offering educational credentials or offering instruction or educational services (primarily to persons who have completed or terminated their secondary education or who are beyond the age of compulsory school attendance) for attainment of educational, professional, or vocational objectives.

This definition, it should be pointed out, eliminates (1) apprenticeship training (the Veterans Administration alone sponsors over 14,000 such programs); (2) employing organizations which offer educational programs or on-the-job training for their employees only or for the employees of their customers; and (3) adult education programs offered by secondary schools. Thus, an eligible postsecondary school must offer courses open to the general public, although specific admissions requirements may be instituted. In making the decision to eliminate educational activities offered by employers, clear recognition was given to the vital importance of on-the-job training. However, the vastness of this enterprise and the complexity of determining where education begins (is a staff meeting education?) suggested the advisability of not including employer organizations within the scope of institutions offering postsecondary education for this survey.

Several additional comments on this subject may contribute to clarification. Under the policy decision to eliminate employer organizations, military service schools (open only to "employees" of the Armed Forces) were not included. However, where a business firm owns and operates a school open to the general public (as in the case of many computer schools), that school would be included in the universe. Actually, a U.S. Department of Labor study uses a sample of manufacturing industries to measure the extent of training in business and industry.

Types of Postsecondary Schools

A few words about the universe of postsecondary schools may be useful in placing, in context, the institutions covered by this report. In general, three different types of postsecondary institutions have been defined:

> Colleges and universities--2-year, 4-year, and with specialized or professional programs

Noncollegiate postsecondary schools--offering specialized training for very specific career objectives

Other institutions--best defined as "encompassing the vast array of formal and informal learning opportunities offered by agencies and institutions that are not primarily engaged in providing structured educational programs."[6]

This report includes none of the institutions in the third category, all of the institutions in the second category, and that part of the first category which offers subbaccalaureate work in occupational fields. For example, programs leading to an associate degree in physical therapy aid, law enforcement/police science, or dental hygiene are included in this publication; such programs as physical therapy, law, or dentistry (offered at the bachelor's, graduate, or professional level) are not included.

In reporting on the universe of postsecondary schools with occupational programs, some analyses are based upon the noncollegiate portion only and are marked accordingly.

A major issue today in postsecondary education is institutional accreditation or approval. This is increasingly important because certain Federal student aid programs now are open to approved or accredited schools. Several tables in this report deal with accreditation or approval status.

No information on enrollments in private postsecondary schools was reported in the Directory of Postsecondary Schools With Occupational Programs or included in the material discussed in this report. Some information on enrollments was collected, but did not appear to be of sufficient validity or consistency to merit publication. However, some of the public school enrollment information did meet normal editing standards and was included in the directory but is not cited in this report. To fill this gap, a 1973-74 Survey of Programs and Enrollments in Noncollegiate and Postsecondary Schools was developed to provide national estimates of the numbers of persons being trained in several hundred occupational fields and to give total enrollments by institutions. This will provide a sound national total, for the first time, on enrollments in the other postsecondary sector. Estimates now range widely with most between 1,000,000 and 3,000,000 students. The significant point here is that there are about three times as many other postsecondary schools as colleges, but they enroll only from a ninth to a third as many students.

---

[6] Financing Postsecondary Education in the United States. Report of the National Commission on the Financing of Postsecondary Education, p. 13.

As pointed out in the Introduction, schools in the postsecondary sector were divided into 11 groups that for certain analyses were grouped into total institutions (including 2- and 4-year colleges) or noncollegiate only (excluding 2- and 4-year colleges). The totals for all schools, including those which were accredited or approved and those which were not, are presented in table 6. Two-year colleges are labelled "Junior/Community College" and 4-year colleges are labelled "College" in this and later tables. Institutions in the "other" category include modeling and other schools not specifically included in the remaining categories. The largest numbers of schools were in the areas of cosmetology (2,443), flight (1,880), and business/commercial (1,679). About a tenth of the schools were collegiate (1,177 of 11,731).

No enrollment information was available for these schools, but total enrollment may show quite a different set of relationships among the various types of schools. For example, the typical cosmetology program lasts 9 to 12 months, while hospital schools of nursing offer programs lasting as long as 36 months. Thus, many groups of students will be trained in cosmetology schools during the student lifetime of a typical nursing class. Correspondence schools (which numbered only 155) tend to be very large, some with as many as 30,000 or 40,000 students enrolled each year. By contrast, flight schools (which numbered 1,800) tend to be small (some with only 6 to 10 students a year), with total enrollment less than their proportion of the total number of schools.

Sharp distinctions are shown by the control of school when reviewing the various types. Overall, 1,783 (15.2 percent) of the institutions were operated by a public agency (generally, State or local). This was in sharp contrast with the secondary level where 96.7 percent of the schools were public. Of the remaining 9,948 postsecondary schools, 8,279 (70.6 percent of the total number of schools) were proprietary, 1,209 (10.3 percent) were nonprofit, and 460 (3.9 percent) were sponsored by a religious organization.

For all practical purposes, the distinction between proprietary and private nonprofit may be slight. Most noncollegiate postsecondary schools are operated by a single manager, who generally is the owner or chairman of the governing body also.

Almost all the schools in correspondence, cosmetology, flight, and business/commercial were under nonpublic control; the great majority of trade and hospital schools were privately controlled. While most technical/vocational schools, technical institutes, 4-year colleges, and other schools were private, the ratios were more nearly even. Only in the case of community/junior colleges were there more public than private schools.

Table 6.--Number of postsecondary schools with occupational programs, by type of school and control: Aggregate United States, 1971

Type of school	Total	Public	Private		
			Proprietary	Independent nonprofit	Religious groups
Total	11,731	1,783	8,279	1,209	460
Technical/ vocational	1,422	561	788	66	7
Technical institute	362	122	213	27	0
Business/ commercial	1,679	5	1,635	33	6
Cosmetology school	2,443	5	2,435	2	1
Flight school	1,880	3	1,862	15	0
Trade school	1,082	54	913	114	1
Correspondence school	155	0	152	2	1
Hospital school	1,266	118	55	779	314
Junior/community college	787	658	14	64	51
College/ university	390	217	5	89	79
Other	265	40	207	18	0

While fewer than 10 percent of the hospital schools were publicly controlled, contacts with individual institutions reveal two different trends with long-range implications. First, many hospitals operated by religious organizations (such as those with Roman Catholic ownership) are eliminating their training programs. Second, many hospitals which formerly offered independent programs are affiliating with public colleges in one of several patterns. In some, the college offers the academic course work and students continue to enroll in the hospital school. In others, the students formally enroll through the college (thus eliminating the hospital school from the list of postsecondary schools), but the student takes some or all of the required field work at the hospital.

Numbers of Postsecondary Schools

Table 7 presents the total number of postsecondary schools with occupational programs by States and other areas. In each State, schools differ not only in number and type of control, but also in philosophy of postsecondary education. Illustrative of the differences in totals are California and New York: although both are comparable in total population, California had two and one-half times as many postsecondary schools as New York (1,451 to 568).

In contrast with the overall rate of 15.2 percent public, over 25 percent of the schools were public in Alabama, Minnesota, Mississippi, Tennessee, and West Virginia. At the other end of the spectrum, public schools accounted for less than 8 percent of the total in California and Delaware.

The table on page 47 compares the total number of colleges and universities (not just those with occupational programs) with the number of noncollegiate postsecondary schools in each State. These have been placed into a ratio (number of noncollegiate postsecondary schools to colleges) to facilitate comparisons of data among States. There are a number of explanations for the range of ratios here and too much should not be read into these relationships.

Ratios range from less than three noncollegiate postsecondary schools for each college and university in Georgia, Iowa, Massachusetts, Mississippi, New Hampshire, New York, North Carolina, South Carolina, Vermont, Virginia, and Wyoming to more than seven to one in Alaska, Arkansas, Louisiana, and Puerto Rico. Overall, there were 4.02 noncollegiate postsecondary schools for each college and university. Two cautions are important in utilizing this set of relationships. First, the number of colleges and universities cited include only those listed in the Higher Education Directory, 1971-72, which does not include many colleges that are nonaccredited or new. Second, the data on colleges are much more precise than those on noncollegiate postsecondary schools. The information on colleges has been collected for many years and the list of schools is much more comprehensive than that for the noncollegiate institutions. Nevertheless, the general order of the relationships is clear and shows a significantly larger number of noncollegiate schools than colleges.

	Number of colleges and universities[a]	Number of noncollegiate postsecondary schools	Ratio PS schools/colleges
Total	2,626	10,554	4.02

Distribution of Postsecondary Schools

At all levels of education, there are many signs of the unique patterns that typify the various States. At the elementary and secondary level, for example, are the numerous districts that characterize Nebraska versus the few large districts in Maryland. Similarly, for collegiate institutions, California is known for its large number of junior colleges. Tables 8a, 8b, and 8c show the numbers of postsecondary schools--both public and nonpublic--with occupational programs, as well as the patterns of schools by type, for the States and other areas.

Technical/vocational schools were fairly consistently distributed among the States, roughly proportionate to their total population, as shown in table 8a. Some of the exceptions were Tennessee, with twice as many schools as Texas, and California with approximately one-sixth of all these institutions. Among States with relatively large numbers of technical institutes were Indiana, New Jersey, North Carolina, Ohio, Pennsylvania, South Carolina, Washington, and Wisconsin. In other States, this same function may be performed by programs operated through 2-year colleges. Business/commercial schools were particularly strong in California (302), which had more than New York, Ohio, Pennsylvania, and Illinois combined. New Jersey, with 66 schools, had almost as many as New York (76).

Reflecting the many jobs for persons with secretarial and other business training, the District of Columbia had approximately the same number of business/commercial schools (14) as did much larger Kansas (15), Nebraska (13), and New Mexico (11). Both Illinois (125) and Michigan (136) had more cosmetology schools than their share of the national average, but all States had five or more. Flight schools are unique, since they are generally operated as an adjunct to an airport and operate when students are available; between sessions, the regular business of the airport continues. This is best illustrated in Alaska, which had 25 flight schools, reflecting the large number of airports in the State. By contrast, such populous States as Connecticut (19), Maryland (16), and Virginia (20) had fewer schools.

Correspondence schools are unique in that they need not be located in a State to operate within it. Thus, the 155 correspondence schools tended to be concentrated in a few States, with California (34), Illinois (20), and New York (17) having almost half of them. On the other hand, no correspondence schools were located in 24 of the States and other areas.

Table 8a. --Number of postsecondary schools with occupational programs, by type of school and by State or other area: Aggregate United States, 1971

Hospital schools present a problem in developing statistics on occupational training. For statistical purposes, a program is counted only once, regardless of how many schools participate. To illustrate, many junior colleges and hospitals cooperate in joint training programs for nurses and other health specialists. Here, our data seek to report only the institution that registered the student, not the various places where laboratory or field work is taken. (It should be noted that the total for California is not complete, since, obviously, many more than 12 hospitals in that State operated health training programs.) The two States with the largest number of hospital training programs were Ohio (118) and Texas (116).

In each State, the number of colleges and universities, both 2- and 4-year, with occupational programs seems closely related to the total number of collegiate institutions in the State. Thus, California, New York, Pennsylvania, Ohio, and Illinois showed large numbers of colleges with occupational programs. There may be more colleges offering occupational programs as only those which conferred degrees in 1970-71 were actually included.

Schools classed as "other" (generally, these are in such fields as modeling) tended to be concentrated in metropolitan areas. Thus, the largest numbers of schools in this category were in California (50), New Jersey (25), New York (21), Ohio (20), and Pennsylvania (17). These 5 States accounted for half of the 263 schools in this group.

Tables 8b and 8c show how the various types of postsecondary schools differ by control. Because they had over 70 percent of such schools, it is obvious that Indiana (13), North Carolina (30), Ohio (17), South Carolina (10), and Wisconsin (18) made publicly supported technical institutes a major component of their educational plan. A similar comment may be made for Texas and its 23 public trade schools, almost half of the national total of 54. Only in Tennessee (25) were there significant numbers of publicly supported hospital schools.

As already mentioned, there were many more postsecondary schools with nonpublic than with public sponsorship. Comparisons by type of school and control, by State, are possible by relating the information in tables 8b and 8c. With the exception of hospital schools and colleges, California showed a significantly large number of private schools in every category. Since many private hospital schools are sponsored by Roman Catholic organizations, they tend to be more numerous in areas with large Catholic populations, such as Massachusetts (80) and Connecticut (42), and out of proportion to their share of the national population.

Numbers and Types of Programs

A different method of analyzing the role of postsecondary occupational schools is presented in table 9, which shows the total number of programs offered in each of the main types of occupational education by the control of the school involved. For example, in the field of agriculture, 70 programs were offered by proprietary schools, a cumulative total of all programs offered by all schools. Overall, 27,396 programs were offered by 11,731 schools, or an average of 2.33 programs per school.

The largest cumulative number of programs was in the field of trades and industrial occupations, already noted as a large diverse category with over 50 different occupational fields. In this area, 10,376 programs were offered by all schools. Next was business and office (6,928), followed by health (3,651) and technical (3,456). By far, the fewest number of programs were in agri-business and home economics. This may reflect the job placement demand for agri-business graduates and/or the relatively large numbers of persons trained in both agriculture and home economics by public secondary schools. This is borne out by looking at the statistics by control of school--almost all programs in agri-business and home economics were sponsored by public institutions.

In the trades and industrial area, public programs accounted for a high percentage of the total, perhaps reflecting the relatively high cost of producing these skills and a prior commitment to use public moneys for this purpose.

In the field of business and office, 74 percent of the programs were offered by nonpublic institutions--which may be an indication of the historically strong role of private commercial education, its relatively low cost, and the steady demand for graduates.

Few of the programs were sponsored by religious schools. The 460 schools supported by religious groups offered a total of 549 programs, about half the ratio for all schools. Of these 549 programs, most (451 or 82 percent) were in the health field.

Table 10 gives the total number of different programs offered by type of program and type of school. Much of the findings might have been anticipated. Almost all of agri-business programs were offered by technical/vocational schools, technical institutes, trade schools, and by 2- and 4-year colleges. Marketing and distribution programs, which cut across all types of sponsorship, were offered by significant numbers of technical/vocational schools, business/commercial schools, as well as both levels of collegiate institutions.

65

Other	610	15	165	26	34	76	24	270

Most of the health programs were offered by either technical/vocational schools or hospital schools, with 2-year colleges the next major type of sponsor. Almost two-thirds of the programs in business and office occupations were sponsored by business/commercial schools. Reflecting the location of flight programs in this category, the largest single type of sponsor for trade programs was that of flight schools, followed by technical/vocational schools and technical institutes. The many programs offered in the trades and industrial area were offered in significant numbers by technical/vocational schools, technical institutes, cosmetology schools, flight schools, and trade schools.

Table 10 also reflects the diversity of the training offered by the various types of postsecondary schools. With a few exceptions (such as no flight schools offered health or home economics courses) most of the types of schools offered programs of each type. Correspondence schools, for example, offered programs in each area, with no one area dominating the field.

Most useful to educational and manpower planners is information on the numbers of programs offered in specific occupational fields by States--presented in tables 11a, for both public and nonpublic schools, 11b, for public schools, and 11c, for nonpublic schools.

In reviewing the total number of different programs by States, in table 11a, some seemed to have more programs than might have been anticipated (Georgia, Missouri, and Tennessee), and some, fewer (Connecticut, Delaware, and Mississippi). By fields, no schools in 11 States and the District of Columbia offered programs in the field of agri-business. Two States offered no postsecondary programs in marketing and distribution and seven no programs in home economics. In the field of marketing and distribution, one would not have anticipated an almost equal number of programs offered in Georgia, Missouri, and New York. Because so many of them were hospital-based, the number of health programs was closely related to State population. In the field of home economics, Georgia offered more programs at the postsecondary level than did any other State. Business and office occupations were offered by all States, with noticeable concentrations in the more metropolitan ones. Technical programs were offered in fairly large numbers, with the largest number in California and Texas. California and Pennsylvania offered the most trade and industrial programs.

Tables 11b and 11c further illustrate these conclusions. Thus, of the 100 home economics programs for Georgia (table 11a), a review of table 11b shows that 83 of these were publicly sponsored. Despite California's reputation for extensive public postsecondary education, most of the programs

in the field of trades and industrial (642 out of 656) were offered by nonpublic institutions.

Numbers of Institutions Providing Training in Specific Fields

Of particular interest to State planners is the number of institutions providing training in specific fields. Paralleling information on offerings at the secondary level, tables 12a (public and nonpublic), 12b (public), and 12c (nonpublic) show how many postsecondary schools offered each of 170 occupational programs. Fields are coded by the program classification system from Handbook VI, as explained in appendix A. It should be noted that totals do not agree with those in tables 11a, 11b, and 11c (which are based upon both collegiate and noncollegiate schools).[7]

Not all the States offered programs in each field, but all States offered one or more programs in the areas of health, business and office, technical, and trade and industrial.

As cited earlier, relatively few of the programs at the postsecondary level were in agri-business fields and, of the total of 285 programs offered in this area by all schools, most (214) were publicly sponsored. The largest numbers were offered in the three fields of agricultural production (01.01) with 62 programs, agricultural mechanics (01.03) with 46 programs, and ornamental horticulture (01.05) with 42 programs. No programs in agricultural production were offered in 27 States. Of the fields grouped under agriculture, other (01.99), most (38 out of 64) were privately sponsored. Two-thirds (195 out of 285) of the programs in agriculture were offered by 11 States, with the most by Minnesota (30), Florida (27), California (25), and Missouri (24).

---

[7] Because of the method by which data on occupational fields were developed, a word of special explanation and qualification is needed for the tables. Information on noncollegiate schools was developed from reports submitted by the States and used the Handbook VI categorization system. Information on most colleges came from the HEGIS survey, using information provided on the schedule for reporting on earned degrees conferred. However, data on some colleges were provided by the States, either because of an overlap in reporting or because the schools were not included in HEGIS. In these cases, the data from the States were used and, thus, some colleges had their occupational fields coded by the Handbook VI categories. Tables 12a and 12b are based upon all schools for which Handbook VI categories were used and, thus, do include some colleges.

In the fields of marketing and distribution, the largest numbers of programs were offered in apparel and accessories (04.02) with 253, and real estate (04.17) with 218, followed by retail trade, other (04.20) with 121, general merchandise (04.08) with 116, advertising services (04.01) with 114, food services (04.07) with 104, and transportation (04.19) with 101. Another large group of programs was unclassified (listed as distributive education, other (04.99) with 107.

Overall, nonpublic schools accounted for 72 percent of the programs in marketing and distribution, with high proportions in apparel and accessories, modeling, and in real estate (which prepares prospective agents for real estate licensing examinations). Public schools offered more than their share of programs in automotive, sales (04.03) and food services (04.07)..

Traditionally, both public and nonpublic organizations have been concerned about the supply of trained persons in health fields. Contrary to what might have been expected, the largest number of programs were not offered in the field of nursing (except when the various types were combined) but in radiologic technology (07.0501) which had 642 out of the total 3,259 in health. Next in order of frequency were practical nursing (07.0302) with 556, nursing, other (primarily diploma nursing) (07.0399) with 391, and nursing assistant (07.0303) with 285. Other large numbers were in medical assisting (07.0904) with 244, dental assisting (07.0101) with 179, medical laboratory technology, other (07.0299) with 169, and medical laboratory assisting (07.0203) with 133. Despite the influx of public funds for health training, less than a third of the programs were operated by public agencies. In two of the major fields, however, public institutions accounted for more than a third: practical nursing (07.0302) with 364 of 556 and nursing assistant (07.0303) with 140 of 244 programs.

In home economics, the 4 largest programs were food management, production , and services (09.0203) with 89 programs; clothing management, production, and services (09.0202) with 80; child development (09.0102) with 49; and clothing and textiles (09.0103) with 44.

Because relatively few program categories were used in business and office, those offered in individual fields were high. Those offered by the most institutions included stenography, secretarial, and related (14.07) with 1,242 programs; accounting and computing (14.01) with 976; filing, office machines, clerical (14.03) with 935; typing and related (14.09) with 919; business data processing systems (14.02) with 919; and office occupations, other (14.99) with 547.

Nonpublic business and commercial schools have, traditionally, been an important part of the noncollegiate postsecondary sector and accounted for 4,956 of the 6,195 programs in this area.

Three fields accounted for over half the 2,959 programs offered in the technical area: commercial pilot training (16.0601) with 1,151, electronic technology (16.0108) with 338, and aeronautical technology (16.0101) with 294. Of the 1,151 commercial pilot training programs, only 3 were offered by public institutions.

In terms of the total, most of the programs (79 percent) in the technical area were offered by nonpublic schools. However, when totals for commercial pilot training were removed, the percent offered by nonpublic schools dropped to 67.

The most programs in any area were offered in trade and industrial, with 9,578 of the 24,516 total for all areas. The two largest fields were cosmetology (17.2602) offered by 2,396 schools and aircraft operations (17.0402) offered by 705 schools. Next were auto mechanics (17.0302) with 493 schools, drafting (17.13) with 489 schools, and metalworking occupations (17.23) with 423 schools.

In summary, it is interesting to review which programs were offered by the most postsecondary schools. The totals for the 10 largest fields are listed below. These accounted for 41.4 percent of the total programs offered (10,150 out of 24,516).

2,396	Cosmetology
1,242	Stenographer, secretarial and related
1,151	Commercial pilot training
976	Accounting and computing
935	Filing, office machines, clerical
919	Typing and related
823	Business data processing systems
705	Aircraft operations
556	Practical nursing
547	Office occupations, other

Accreditation or Approved Status of Postsecondary Institutions

Tables 13 and 14 present information on the accreditation or approval status of postsecondary institutions. In summary, these tables report the degree to

which postsecondary schools were accredited by an agency recognized by the Office of Education or approved by either OE or the Veterans Administration for student participation in various Federal programs.

The following status categories are used in table 13.

OE approved accrediting agency--School is approved by a professional or occupational association whose accreditation is recognized by the Office of Education. In general, these associations accredit programs rather than institutions. For example, a single technical institute may have programs accredited by three or four associations. At the other extreme are cosmetology schools, with only a single program, where one accreditation covers the entire institution.

Regional association--School is accredited by one of the six regional accrediting agencies, which also accredit schools and colleges. Illustrative is the North Central Association of Colleges and Secondary Schools. These associations accredit the entire institution rather than specific programs.

Federal Insured Student Loan Program--School has been approved by the Office of Education and students are eligible to participate in the Federally Insured Student Loan Program (FISL).

Veterans Administration (VA)--School has been reviewed on behalf of the Veterans Administration and students are eligible for participation in the educational benefits program operated for veterans.

Other--School has none of the above accreditation or approval statuses.

Since many schools have more than one of the above types of approval (such as an institution approved by both a regional association and the Veterans Administration), the counts for the various types of status greatly exceed the number of institutions. A key figure, however, is the fact that of 11,731 schools--using the above criteria--a total of 3,721 (31.7) percent had no accreditation or approval status.

Overall, more institutions were approved for student support (VA and FISL) than were accredited. This may reflect the feeling on the part of many postsecondary schools that as long as their students were fully eligible for Federal programs, no further accreditation or approval was necessary. This differs considerably from the collegiate postsecondary sector, where almost all colleges and universities seek and obtain accredited status. The types of schools most likely to have some form of accreditation, in addition to 2- and 4-year colleges, were hospital schools (87.4 percent accredited), technical institutes (83.1 percent), correspondence schools (73.5 percent), and flight schools (71.5 percent). Those with the lowest percent of schools with no accreditation included technical/vocational (64.9 percent), cosmetology (60.6 percent), business/commercial (57.4 percent), trade (53.4 percent), and other schools (17.0 percent).

Since it is organized to show how many schools have each major type of accreditation, the information in table 13 does not show the extent of overlap among the various types. This overlap is presented in table 14 for the 10,394 noncollegiate postsecondary schools with occupational programs. Various combinations of accreditation or approval were used, following the same definitions discussed under table 13.

The largest number of training institutions was approved by the Veterans Administration (5,770), either exclusively by the VA (3,264) or along with some other type of accreditation (2,506). While half the noncollegiate schools had VA approval, this was significantly less than what would be the corresponding figure for colleges and universities. The next largest group consisted of schools in the "other" category--that is, institutions with no accreditation.

Students at 2,876 institutions were eligible for participation in FISL. Combining all institutions approved for either FISL or VA, all but 276 (2.7 percent) of the schools were included. Associations accredited 1,109 of these noncollegiate institutions, while the regional associations accredited only 117.

Additional Characteristics of Postsecondary Schools

Schools were asked whether they offered some correspondence courses. This information was not edited and no check was made on the validity of the reports. The need for some information on this subject led to inclusion of the unedited data on the assumption that at least the general tendency of these schools to offer correspondence work would be shown. Table 15 shows the number of schools which were either totally correspondence institutions (155) or offered both resident and correspondence work (183).

In addition to institutions that were totally correspondence or totally resident, there were some correspondence schools that require the student to come to

Table 15. --Total number of noncollegiate postsecondary schools with occupational programs and those offering some correspondence courses, by type of school: Aggregate United States, 1971

Type of school	Total number of schools	Schools offering some correspondence courses			
		Total	Public	Private	
				Proprietary	Other
Total	10, 240	338	4	318	16

Hospital	263	5	1	3	1
Other	154	5		5	-

the school itself for the final phase. Typical is the truck-driving course, which begins by correspondence and ends with a 2-week period of actual driving experience on a special range located at the school. Another example is dental hygiene in which students begin with home study, using text books and models, then end up with supervised experience on dental patients.

The form asked respondents to indicate the year their school was founded. Slightly less than half (5,170 of 10,554) of the schools provided a date. No editing was attempted, or indeed was possible, on this section. In some cases, the date may be for the institution which sponsors the school--such as the date when the hospital that later started a nursing training program was founded, or the date when an airport, which now operates a flight school, began operation. This factor may have influenced the results from some of the third of the institutions founded before 1950, but probably was not significant for those reporting a more recent founding date. Details are shown in table 16.

The year when the typical school was founded (the actual median for all schools) fell in the 1960-1964 period. Thus, most schools were less than 10 years old, in marked contrast with the age of collegiate institutions. By type of school, the median for year founded for six of the types of schools was also between 1960 and 1964. The median for business schools was in the 1955-1959 period, as was the median for correspondence schools. The median for hospital schools was significantly older: 1910-1919.

Looking at information for years 1965 through 1970, the annual rate of founding of new schools was 4.8 percent per year. Assuming that the half of the schools that did not report a founding date had the same characteristics, the figures suggest that each year slightly over 500 new noncollegiate post-secondary institutions were founded.

Like other components of the field of private enterprise, noncollegiate post-secondary career schools exhibited numerous changes in ownership--often through their acquisition by a chain of schools. Table 17 shows the extent to which these career schools operated as part of a chain (or group) of institutions. Illustrative are large chains with dozens of schools in all parts of the country or two schools with a single owner located in different parts of the same city.

Table 17 shows that, of 9,228 schools for which such information was provided by the institution (or estimates by an editor), 1,809 (19.6 percent) were operated in conjunction with other schools. Of these 1,809 schools, 1,372 (14.9 percent) were owned by or operated in tandem with another educational

Table 16. --Year founded of noncollegiate postsecondary schools with occupational programs, by type of school: Aggregate United States, 1971

---

* In some cases, organizations may have reported the date they were founded, not when they began a formal program of instruction. This may be particularly true of hospitals, although some began programs to train nurses in colonial times.

Table 17.--Number of noncollegiate postsecondary schools with occupational programs operated as a part of a chain of schools, by type of school: Aggregate United States, 1971

Type of school	Total Number	Total operated with other schools		Operated by an educational institution	Operated by a noneducational institution
		Number	Percent

	9,228	1,809	19.6%	1,372 (14.9%)	437 (4.7%)

institution. Another 437 schools (4.7 percent) were owned by a noneducational institution. Illustrative of this would be a computer company that owns and operates a series of business schools.

Several decisions were made in developing the data in table 17. First of all, hospitals were excluded because of the confusion over the ownership and operation of their health-training schools. For example, is a school of nursing owned by the hospital with which it is affiliated? Similarly, in connection with flight schools, a decision was made to list only those owned by an organization located in a different city. Many flight schools were owned by noneducational institutions, but actual ownership data were very incomplete. Thus, the total of outside ownership for flight schools was clearly underestimated. Most of the schools with outside ownership in the "Other" category were modeling and were owned or franchised by two large national chains.

APPENDIXES

B. Secondary School Survey Form

C. Postsecondary School Survey Form

Appendix A

VOCATIONAL FIELDS USED TO CLASSIFY OCCUPATIONAL PROGRAMS AND CURRICULUMS

All occupational fields reported by both secondary and postsecondary schools were classified according to 170 different occupational categories.

For most purposes, these fields were compressed into seven major groups of occupational training. When home economics was split into two fields, this total became eight. For table 5 (secondary) and table 12 (postsecondary), the 170 occupational fields listed below were used and this appendix shows the code numbers and titles for these fields.

01	AGRI-BUSINESS OCCUPATIONS
01.01	Agricultural Production
01.02	Agricultural Supplies/Services
01.03	Agricultural Mechanics
01.04	Agricultural Products
01.05	Ornamental Horticulture
01.06	Agricultural Resources
01.07	Forestry
01.99	Agriculture, Other

04	MARKETING & DISTRIBUTION OCCUPATIONS
04.01	Advertising Services
04.02	Apparel and Accessories
04.03	Automotive
04.04	Finance and Credit
04.05	Floristry
04.06	Food Distribution
04.07	Food Services

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON, D.C. 20202

VOCATIONAL EDUCATION DIRECTORY SURVEY
PUBLIC/PRIVATE SECONDARY VOCATIONAL SCHOOL DATA: FALL-1971

O.M.B. NO. 51-S71016
APPROVAL EXPIRES: 4/30/72

FOR U.S.O.E. USE ONLY

NOTE: Read instructions on page 4 before completing this form. Answer all items.

SCHOOL IDENTIFICATION CODES ➡	1. USOE CODE	2. STATE'S CODE	3. U.S. CONGRESSIONAL DISTRICT NUMBER

4. NAME OF SCHOOL	5. STREET ADDRESS	6. CITY/POST OFFICE	7. STATE	8. ZIP CODE

9. CODE NUMBER/NAME OF COUNTY OF SCHOOL LOCATION	10. NAME AND/OR NUMBER OF SCHOOL DISTRICT	10A. GRADE SPAN

NOTE: Data acquired in this survey may be published in listings by individual institutions.

11. **TYPE OF SCHOOL.** ENTER CODE OF ONE OF THE FOLLOWING TYPES WHICH BEST DESCRIBES THIS SCHOOL.

ENTER LETTER CODE A, B, C, OR D HERE ⟶ (50) ☐

A. REGULAR OR COMPREHENSIVE SECONDARY SCHOOL. A school with several departments (e.g., English, Science, Vocational) offering a diversified program to meet pupil needs.

B. SPECIALIZED VOCATIONAL SECONDARY SCHOOL. A high school used exclusively or principally for the provision of Vocational/Technical Education to persons available for full-time study.

C. COMBINATION SPECIALIZED SECONDARY AND TECHNICAL/VOCATIONAL SCHOOL. Used exclusively for the provision of vocational education to persons available for full-time study, who are in or have left high school.

D. NONE OF THE ABOVE *(specify)* ____________

12. **AREA VOCATIONAL SCHOOL.** INDICATE IF THIS IS AN AREA VOCATIONAL SCHOOL BY ENTERING "Y" FOR YES OR "N" FOR NO HERE ⟶ (51) ☐

An area vocational school is defined as a public school approved by the State Board for Vocational Education to provide instruction in occupations for residents of an area usually larger than a local administrative unit.

13. **CONTROL OF SCHOOL.** ENTER CODE OF ONE OF THE FOLLOWING WHICH BEST DESCRIBES THE TYPE OF AGENCY OPERATING THIS SCHOOL.

ENTER LETTER CODE A, B, C, D, OR E HERE ⟶ (52) ☐

A - Public, supported primarily by Federal funds.

B - Public, supported primarily by State funds.

C - Public, supported primarily by local funds.

D - Nonpublic, supported primarily by funds from a religious organization.

E - Nonpublic, other.

14. **ENROLLMENT** *(see instructions)*

AS OF OCTOBER 1, 1971

A. SCHOOL TOTAL ENROLLMENT (53) ☐☐,☐☐☐ (57)

B. SECONDARY VOCATIONAL ONLY (58) ☐,☐☐☐ (61)

C. POSTSECONDARY VOCATIONAL ONLY (62) ☐,☐☐☐ (65)

FOR YEAR JULY 1, 1970 - JUNE 30, 1971

D. ADULT VOCATIONAL (66) ☐,☐☐☐ (69)

15. **SPECIAL VOCATIONAL PROGRAMS** *(see instructions) (check as applicable)*

A. DISADVANTAGED (70) ☐

B. HANDICAPPED (71) ☐

C. COOPERATIVE WORK STUDY (72) ☐

D. WORK STUDY (73) ☐

E. GROUP GUIDANCE *(pre-vocational)* (74) ☐

F. NONE OF THESE PROGRAMS (75) ☐

INSTRUCTIONS AND DEFINITIONS

GENERAL

1. This survey is intended to include all public and private secondary and combination schools which offer vocational education.

2. Secondary school is defined as a school offering any of grades 9 through 12.

3. Combination school comprises any span of grades 9 through 12 plus postsecondary *(beyond grade 12)* but below the baccalaureate degree.

4. Vocational Education is educational instruction below the baccalaureate level designed (a) to prepare individuals for gainful employment in recognized occupations and/or new and emerging occupations; (b) to assist individuals in making informed and meaningful occupational choices; and (c) to upgrade or update those individuals already in an occupational field.

5. Requested information should refer to **October 1, 1971**, or nearest date thereto, except adult enrollment which should be for the period **July 1, 1970 - June 30, 1971**.

6. Where applicable, standard U.S. Office of Education definitions are used. See **Standard Terminology for Curriculum and Instructions in Local and State School Systems Handbook VI**; and Vocational Education Amendments of 1968.

7. Forms for secondary schools contained in the 1070-71 OE Universe File have been preprinted with items 1, 2, and 4 through 10A. Please verify, mark corrections, supply the Congressional district number and complete the remaining items on the form for each secondary school offering vocational education.

8. Blank forms are provided for reporting those schools not in the Universe File that offer vocational education *(e.g., Specialized Secondary, Combined Secondary Postsecondary, Area Schools.)* Please supply all items if blank forms are used.

9. Preprinted spaces for items 11 through 16 indicate the maximum allowable number of spaces for either alphabetic or numeric entries. If an entry exceeds the space allowance, reformat by abbreviating.

10. For convenience, items to be answered "YES" or "NO" are to be coded "Y" or "N"

Completed report due in your State department November 1, 1971.

SPECIFIC

ITEM 1. If not preprinted, obtain U.S.O.E. number from your State coordinator. *(15 digit number)*

ITEM 2. Optional. The State's code is whatever school identification code the State may have established. For State use only.

ITEM 3. Enter the U.S. Congressional district number in which the school is located. In the case of 1-digit Congressional district numbers, supply a leading 0, e.g., Congressional district "1" should be shown as "01", etc.

ITEM 4. If not preprinted, enter name of school. Use conventional abbreviations such as "H.S." for high school, "INST." for institute, etc. *(maximum 30 spaces)*

ITEM 5. If not preprinted, enter street number and name, post office box number, RFD route, or other similar designation. *(maximum 22 spaces)*

ITEM 6. If not preprinted, enter city name. *(maximum 13 spaces)*

ITEM 7. If not preprinted, enter standard 2 letter State abbreviation.

ITEM 8. If not preprinted, enter ZIP code.

ITEM 9. If not preprinted, obtain 3-digit county code number from your State coordinator and enter. Also enter county name. Code number should appear FIRST, followed by county name.

ITEM 10. If not preprinted, obtain school district name and/or number from your State coordinator and enter.

ITEM 10A. If not preprinted, enter grade span of grade(s) 9 through 12.

ITEM 11. Enter at least one but no more than one letter code A, B, C, or D, denoting type of school. If more than one applies, use the primary classification.

ITEM 12. Enter "Y" if this is an area vocational school or "N" if it is not.

ITEM 13. Enter at least one but no more than one letter code A, B, C, D, or E denoting control of school.

ITEM 14. Enrollment as of **October 1, 1971**, or the nearest date thereto for which records are available, for A, B, C. Total adult enrollment from **July 1, 1970 - June 30, 1971** for D.

ITEM 14A. Enter total secondary school enrollment; this will not necessarily be the total of B, C, and D.

ITEM 14B. Enter unduplicated count of students enrolled in secondary *(grades 9-12)* vocational education programs.

ITEM 14C. Enter unduplicated count of students enrolled in postsecondary *(above grade 12)* vocational education programs.

ITEM 14D. Enter total unduplicated adult enrollment in vocational education programs from **July 1, 1970 - June 30, 1971**.

ITEM 15. Special vocational programs *(check as applicable)*:

> DISADVANTAGED persons have academic or other handicaps relating from socioeconomic or cultural impoverishment that prevent them from succeeding in regular vocational programs. Check ONLY if special facilities or services are provided or if training programs are adjusted to meet vocational education needs of students who are disadvantaged.
>
> HANDICAPPED persons have a physical, mental, or other health impairment which prevents them from succeeding in regular programs without special educational assistance or a modified vocational program. Check ONLY if these services are provided.
>
> COOPERATIVE WORK STUDY PROGRAM is for persons who, through a cooperative arrangement between the school and employers, receive instruction in vocational education by alternating of study in school with a job in any occupational field. *(Part G of the Vocational Educational Amendments of 1968.)*
>
> WORK STUDY PROGRAM is for full-time vocational education students, from 15 through 20 years of age, in need of earnings to continue their education. Such students may be employed by the local education agency or some other public agency or institution but may not work for more than 15 hours a week, or receive more than $45 a month. *(Part H of the Vocational Education Amendments of 1968.)*
>
> GROUP GUIDANCE (PREVOCATIONAL) INSTRUCTION designed to familiarize individuals with the broad range of occupations for which special skills are required.

16. Check ALL vocational-technical education instruction programs being offered by this school during the 1971-72 school year. Do not line through or cross out programs not offered. Every effort should be made to classify programs according to the OE vocational code selection shown. See **Vocational Education and Occupations**, OE 80061, July 1969, as a guide for classifying occupations in their appropriate program fields. If any programs cannot be identified on the listing, write the titles in the blank spaces provided at end of listing and give a brief description of each. It is necessary to check or describe at least one vocational education program in order for the school to qualify for this survey. After completing each group of vocational education programs, add the boxes checked for that group and enter the total in the space provided at the top of the group listing.

17. For U.S.O.E. use only.

> **IMPORTANT: Respondent will enter U.S.O.E. code at top of page 3.**

13A. TYPE OF SCHOOL. ENTER CODE OF ONE OF THE FOLLOWING TYPES WHICH BEST DESCRIBES THIS INSTITUTION.
Use letter code "A" through "K" → *(16)* ☐

A. TECHNICAL OR VOCATIONAL SCHOOL. A school used exclusively or principally for providing vocational education to persons who have completed or left high school and who are available for full-time study.

B. TECHNICAL INSTITUTE. A public or nonpublic institution offering instruction in one or more of the technologies.

C. BUSINESS/COMMERCIAL SCHOOL. A nonpublic educational institution offering courses for business occupations, such as accounting, data processing, secretarial.

D. COSMETOLOGY SCHOOL. A school offering programs in beauty treatments, such as care and beautification of hair, complexion, and hands.

E. FLIGHT SCHOOL. A school offering programs for work as an aircraft mechanic, pilot, or other technical fields related to aviation.

F. TRADE SCHOOL. A nonpublic educational institution offering courses for trade occupations, such as welding, barbering, auto mechanics.

G. CORRESPONDENCE SCHOOL. An institution offering instruction only through the systematic exchange between teacher and student of materials sent by mail. No facilities are available for resident students.

H. HOSPITAL SCHOOL. A hospital, sanatorium, or convalescent home offering instruction for medical and paramedical occupations.

I. JUNIOR/COMMUNITY COLLEGE. An institution offering the first 2 or 3 years of college instruction. It frequently grants a certificate or an associate degree but not a bachelor's degree.

J. COLLEGE. An institution offering instruction at the college level leading to a bachelor's or higher degree. It frequently offers occupational programs leading to an associate degree, diploma, or certificate below the baccalaureate.

K. OTHER.

13B. IF ANSWER TO ITEM 13A IS "K" *(Other)*, SPECIFY TYPE OF SCHOOL 17 29

13C. DOES THIS INSTITUTION OFFER ANY VOCATIONAL EDUCATION AT THE HIGH SCHOOL LEVEL? 30
Enter "Y" for "Yes" or "N" for "No" ☐

OE FORM 2334-1, 6/71

VOCATIONAL EDUCATION DIRECTORY PROJECT
Public and Private Postsecondary Vocational School Data: 1970-71
Instructions and Definitions

(OE Form 2334-1, 6/71)

GENERAL

NOTE *Data acquired in this survey may be published in a listing by individual institutions.*

1. This survey is intended to include all public and private nonprofit and proprietary postsecondary schools which offer vocational education below the baccalaureate level. Excluded from this survey are institutions of higher education which are accredited and/or eligible for inclusion in the **Education Directory --Higher Education.** Data for these institutions will be derived from other reports to the U.S. Office of Education.

2. Vocational education is educational instruction below the baccalaureate level designed *(a)* to prepare individuals for gainful employment in recognized occupations and/or in new and emerging occupations, *(b)* to assist individuals in making informed and meaningful occupational choices, and *(c)* to upgrade or update those individuals already in an occupational field.

3. A school consists of groups of students with one or more teachers who give instruction of a defined type in one or more subject fields. EXCLUDED from this survey are tutorial services, schools providing training in avocational or hobby courses, such as music, art, or sewing for personal use, self-employed instructors, on-the-job training in industrial settings, and formal labor/management apprenticeship programs.

4. Data should refer to the period between July 1, 1970, through June 30, 1971.

5. A separate form should be completed for the main campus or office and for each division or branch.

6. Where applicable, standard U.S. Office of Education definitions are used. See **Standard Terminology for Curriculum and Instruction in Local and State School Systems, Handbook VI;** and **Vocational Education Amendments of 1968.**

7. Preprinted spaces indicate the **MAXIMUM** allowable number of spaces for either alphabetic or numeric entries. If an entry exceeds the space allowance, reformat by abbreviating.

8. For convenience, items to be answered "yes" or "no" are to be coded "Y" or "N".

SPECIFIC

ITEM 1A. Use 2-digit code assigned to your State.

ITEM 1B. For State use only. Leave blank.

ITEM 2. For State use only. Leave blank.

ITEM 4. Use 3-digit code assigned to county in which institution is located.

ITEM 6. Enter institution street address. Street address is to consist of street number and name, Post Office box number, RFD route, or other similar designation.

ITEM 9. Enter the U.S. Congressional district number in which the institution is located. In the case of 1-digit Congressional district numbers, supply a leading 0, e.g., Congressional district "1" should be shown as "01", etc.

ITEM 12C. If "Y" is entered in either item 12A OR 12B, enter name, street address, city, State code number, and postal zip code of the parent institution or organization. If State code number is unknown, write in State name.

ITEM 13A. Select the one "Type of School" which represents the institution's principal classification. Enter the corresponding letter code A through J in the preprinted space provided. If this institution is "Other" than those described, enter the letter code "K" and specify type of school in 13B.

ITEM 14. Enter unduplicated count of students below the baccalaureate enrolled in this institution between July 1, 1970, and June 30, 1971. Enter all categories that apply and verify row and column totals. Follow the preprinted form for number entries, such that units are in the right-most position, tens are in the next position to the left, etc.

ITEM 16A, B. Select the one "Type of Control" that best describes this institution. Enter the corresponding letter code A, B, C, or D in the preprinted space provided. If "D" is entered in 16A, specify the religious group with which the institution is affiliated in 16B.

ITEM 17. Check all special programs and services offered at this institution. If none is offered, check "None". Special programs and services are defined as:

DISADVANTAGED persons have academic or other handicaps resulting from socioeconomic or cultural impoverishment that prevent them from succeeding in regular vocational programs. Check **ONLY** if special facilities or services are provided or if training programs are adjusted to meet vocational education needs of students who are disadvantaged.

HANDICAPPED persons have a physical, mental, or other health impairment which prevents them from succeeding in regular programs without special educational assistance or a modified vocational program. Check **ONLY** if these services are provided.

COOPERATIVE WORK EXPERIENCE is for persons who, through a cooperative arrangement between the school and employers, receive instruction in vocational education by alternating study in school with a job in any occupational field. *(Part F of the Vocational Education Amendments of 1968.)*

WORK STUDY PROGRAM is for full-time vocational education students, from 15 through 20 years of age, in need of earnings to continue their education. Such students may be employed by the local education agency or some other public agency or institution but may not work for more than 15 hours a week, or receive more than $45 a month. *(Part H of the Vocational Education Amendments of 1968.)*

GUIDANCE COUNSELING and/or PLACEMENT SERVICES should be checked only if the institution provides these services as a regular activity or, in the case of a private institution, if these services are included as part of its tuition or fees.

ITEM 22. Check **ALL** vocational-technical education instruction programs offered by this institution during the 1970-71 school year. Do not line through or cross out programs not offered. Every effort should be made to classify programs according to the OE vocational code selection shown. See **Vocational Education and Occupations, OE-80061,** July 1969, as a guide for classifying occupations in their appropriate program fields. If any programs cannot be identified on the listing, write the titles in the blank spaces provided at the end of the item and give a brief description of each. It is necessary to check or describe at least one vocational education program in order for the institution to qualify for this survey. After completing each group of vocational education programs, add the boxes checked for that group and enter the total in the space provided at the top of the group listing.

THANK YOU FOR YOUR COOPERATION
